

ReadyFlyLog Cookie and Browser Storage Notice

Version	1.0
Status	Final publication ready English
Effective date	11 September 2026
Last reviewed	11 September 2026

This Notice explains the browser storage currently used by ReadyFlyLog, why it is used, how long it remains, and what happens if a user clears or blocks it. ReadyFlyLog currently uses essential or user-requested functional storage only. It does not use advertising cookies, behavioral tracking, or non-essential analytics.

1 Operator and Scope

ReadyFlyLog is operated by Sándor Levente Szabó e.v., 9400 Sopron, Semmelweis utca 10., Hungary, registration number 61070435, email readyflylog@gmail.com. This Notice applies to the ReadyFlyLog website and web application. The Privacy Policy explains the related personal-data processing in more detail.

2 Browser Storage Explained

Browsers can store small values for a website. Cookies are one method. Local storage and session storage are similar browser features that keep values on the user's device. Local storage normally remains until the application or user removes it. Session storage normally ends when the relevant browser tab or session closes. A service can also expire or replace a value earlier.

The legal assessment depends on the purpose, not the storage label. ReadyFlyLog uses the items below to provide sign-in, session continuity, a remembered notice acknowledgement, and a requested demo experience. These items are not used to follow users across unrelated websites.

3 Current Browser Storage Inventory

Item	Technology	Purpose	Duration criteria	Effect if blocked or cleared
Supabase authentication and session state	Local storage	Keeps the user signed in, restores an authenticated session, and supports secure session continuity. Provider-generated key names can vary with the configured project.	Until sign-out, session expiry or invalidation, application removal, or browser clearing, depending on the stored value.	The user may be signed out, may need to authenticate again, or may be unable to use protected Workspace features.
readyflylog-cookie-consent	Local storage	Records that the user has acknowledged this Notice so the informational message does not reappear unnecessarily. It does not record marketing consent or track behavior.	Until the user clears it or ReadyFlyLog resets or replaces the acknowledgement because the notice or implementation changes.	The notice may appear again. Core Service functions should otherwise remain available.
Synthetic demo state	Session storage	Keeps temporary sample or demonstration state within the active browser session. Production Workspace Personal Data is not intended for this storage.	Until the relevant browser tab or session closes, or the user or application clears it earlier.	The demo may restart or lose its temporary state.

4 Why No Consent Button Is Required

The current items are necessary to provide an explicitly requested sign-in or functional service, or to remember the user's requested acknowledgement. Under the rules implementing Article 5(3) of the ePrivacy Directive, consent is generally not required for storage or access that is strictly necessary to provide a service requested by the user. Related personal-data processing relies on the contract, legitimate security and service-administration interests, or Customer instructions as described in the Privacy Policy.

The cookie message is therefore informational. Its control should say Close, Understood, Got it, or equivalent wording. It should not say Accept all or imply that ReadyFlyLog is seeking consent for advertising or analytics that are not present.

5 Technologies Not Currently Used

ReadyFlyLog does not currently use Google Analytics, Meta Pixel, PostHog, Plausible, advertising cookies, marketing pixels, cross-site behavioral tracking, newsletter tracking, or a consent-management platform for non-essential purposes. ReadyFlyLog also does not use browser storage to operate a payment-card wallet or automatic recurring-payment service.

6 User Controls

A user can sign out through the Service and can clear site data through browser settings. Browsers also allow storage to be blocked. Blocking or clearing authentication state can prevent sign-in continuity and access to protected features. Clearing the acknowledgement value can make the informational notice appear again. Clearing session storage can reset the synthetic demo.

Browser controls apply on the device and browser profile where the user changes them. Clearing browser storage does not delete the ReadyFlyLog account, Workspace records, audit evidence, or files in Google Drive. Account closure or deletion requires a separate verified request.

7 Future Analytics or Marketing Technology

Before introducing a non-essential analytics, advertising, or similar technology, ReadyFlyLog will assess its purpose, data, provider, duration, and legal basis; update this Notice and the Privacy Policy; and deploy any consent mechanism required by law. A future non-essential item will not be treated as covered by the current informational acknowledgement.

8 Changes to This Notice

ReadyFlyLog may update this Notice when browser storage, providers, or law changes. The published version and effective date will show the current terms. A material change may also be announced through the Service or by email where appropriate.

9 Contact

Questions about browser storage or related personal-data processing may be sent to readyflylog@gmail.com. Postal contact: Sándor Levente Szabó e.v., 9400 Sopron, Semmelweis utca 10., Hungary.
