

ReadyFlyLog Subprocessor and Service Provider Information

Version	1.0
Status	Final publication ready English
Effective date	11 September 2026
Last reviewed	11 September 2026

This document identifies the principal third parties used in the current ReadyFlyLog service and explains their role. It distinguishes direct Subprocessors for Customer Workspace Personal Data from Lovable-managed onward providers, Customer-directed Google services, and providers ReadyFlyLog uses only in its independent Controller role. That distinction determines which providers are covered by the Data Processing Agreement's authorization and objection process.

1 ReadyFlyLog Contact

ReadyFlyLog is operated by Sándor Levente Szabó e.v., 9400 Sopron, Semmelweis utca 10., Hungary. Questions and Subprocessor objections may be sent to readyflylog@gmail.com.

2 Direct Subprocessors

Provider and legal entity	Service role	Data categories	Location and transfer safeguards	Official information
Lovable Labs Incorporated 1 Lincoln St, Boston, MA 02111, United States	Application hosting and managed cloud services, database, authentication, server functions, security, and error reporting.	Workspace and account identifiers, application records, authentication data, service logs, error traces, limited URL or support context, and security events as needed for the component.	Primary application data region for the current ReadyFlyLog deployment is Ireland in the EU. Lovable and authorized onward providers may process limited data elsewhere. Lovable DPA and applicable Standard Contractual Clauses support restricted transfers.	Lovable DPA Lovable Subprocessor information Lovable Trust Center
Plus Five Five, Inc. operating Resend 2261 Market St #5039, San Francisco, CA 94114, United States	Transactional authentication, invitation, and service email. ReadyFlyLog does not use Resend for a newsletter, marketing broadcast, or behavioral tracking.	Recipient email address, name where supplied, message content, template or service context, and email delivery metadata.	United States and other locations used by Resend's authorized provider chain. Resend DPA, applicable Standard Contractual Clauses, and other lawful transfer mechanisms, including an adequacy framework where applicable.	Resend DPA Resend Subprocessor List

Official provider sources: [Lovable DPA](#); [Lovable Subprocessor information](#); [Lovable Trust Center](#); [Resend DPA](#); and [Resend Subprocessor List](#).

ReadyFlyLog reviews the applicable direct-provider DPA and public provider chain. An onward provider used through Lovable or Resend is not presented as a separate direct ReadyFlyLog contract unless ReadyFlyLog actually engages that entity directly.

3 Managed Onward Providers

Lovable manages the infrastructure chain used for application hosting, database, authentication, server functions, and related platform services. The current deployment includes Supabase-based components within that chain. Lovable's list can change, so the controlling current list is the one maintained through Lovable's official Subprocessor information and Trust Center. ReadyFlyLog retains evidence of the applicable list and assesses material changes through its supplier process.

4 Customer Directed Google Services

Provider category	Role and purpose	Data and control	Transfer and terms
Google Drive and supported Google APIs Google LLC or the applicable Google contracting entity	Optional integration chosen by the Customer or an authorized user. Used for specific aircraft files in Google Drive and, where supported, user-initiated briefing, weather, airport-related, or translation requests.	ReadyFlyLog requests drive.file for specific files used with the application. Aircraft document bytes remain in Customer-controlled Drive. ReadyFlyLog stores connection data, protected tokens, metadata, and Drive references. The user can revoke access through Google Account permissions.	Google processes under the Customer's or user's Google relationship and applicable Google terms. ReadyFlyLog's use of Google API data follows the Google API Services User Data Policy, including Limited Use requirements.

Google is classified here as a Customer-directed third-party integration rather than an ordinary ReadyFlyLog Subprocessor because the Customer or user independently selects the Google account, authorizes the connection, and controls the underlying Drive files. ReadyFlyLog remains responsible for its own processing of connection data and for following Customer instructions under the DPA.

Google sources include the [Google API Services User Data Policy](#), the [Google OAuth scope list](#), and [Google Account connection controls](#).

5 Controller Side Service Providers

Provider	ReadyFlyLog role and purpose	Data categories	Classification
KBOSS.hu Kft. operating Számlázz.hu	ReadyFlyLog may use this service manually outside the application to issue or administer its own invoices.	Customer or payer identity, address, country, tax or VAT details, invoice content, and invoice administration data.	Controller-side service provider. Not part of the Workspace processor chain for the current use.
Professional advisers, insurers, and public authorities	Legal, tax, accounting, insurance, dispute, and mandatory reporting matters when relevant.	Only data necessary for the specific advice, claim, legal obligation, or lawful request.	Independent controller, processor, joint controller, or recipient depending on the actual engagement and law.

6 Services Not Currently Used

ReadyFlyLog does not currently use Stripe, PayPal, Paddle, another in-application payment processor, an automated recurring-payment system, Google Analytics, Meta Pixel, PostHog, Plausible, an advertising network, or a newsletter and marketing-broadcast platform. A dormant integration is not listed as active. Before using a new provider to process personal data, ReadyFlyLog will complete the review and notice steps below.

7 Change Notice and Customer Objection

1. ReadyFlyLog records the proposed provider, service, data categories, locations, transfer basis, and planned start date.
 2. Where reasonably practicable, ReadyFlyLog publishes the updated information and emails affected Customer Administrators at least 30 calendar days before a new or replacement direct Subprocessor starts processing.
 3. A Customer may object within the notice period by emailing readyflylog@gmail.com with reasonable data-protection grounds related to the proposed processing.
 4. ReadyFlyLog and the Customer will assess a reasonable alternative, additional safeguard, or discontinuation of the affected feature. If none is reasonably available, the affected Service or Subscription may be terminated under the Agreement.
 5. For an urgent change required for security, legal compliance, availability, or essential continuity, ReadyFlyLog may implement first and notify affected Customers as soon as reasonably practicable.
- Updates to an onward-provider list managed by Lovable or Resend will be handled through ReadyFlyLog's provider review. ReadyFlyLog will give direct Customer notice where the change materially affects the Customer's processing and advance notice is reasonably practicable.
